

NOLAN PETERSON

Operations Controller

HOPE BAY, TMAC RESOURCES

Nolan Peterson was raised in Cambridge Bay, Nunavut. Growing up he liked computer games, board games and enjoyed school. At the age of 17 he left Cambridge Bay to complete his post secondary education attending the University of British Columbia where he studied materials and metallurgical engineering. He participated in the co-operative program and graduated with a Bachelor of Applied Science degree.

After graduating, he worked at a large engineering and construction management company for five years and obtained his Master of Business Administration. While completing his MBA he worked for an intermediate size gold mining company.

Nolan joined TMAC Resources as operations controller in January 2018. Based at TMAC's corporate office in Toronto, Nolan reports to the company's chief financial officer.

Growing up, Nolan's parents motivated him by telling him education is important and, that being a good student and well educated will open doors to opportunities. Nolan was also very competitive academically; he and his friends would compete in school and push each other to achieve results and success. He also had a strong support network of other friends and family. When asked about the best advice he has for northern youth, Nolan said, "always look for a way to better yourself and become a better person. Whether it is academically, personally, or even your level of happiness. Always strive for personal improvement as that will naturally lead to better things that can provide success."
