

JOB GOALS

- Keep information in SAP system current
- Develop plans in SAP to ensure all mine teams are supported

SKILLS THAT PLAY A PART

- Willingness to learn
- Willingness to ask questions
- Willingness to get involved

EDUCATION AND TRAINING NEEDED

- College diploma
- Maintenance management professional certification is an asset
- Computer science, math, and technical education are good logic courses for understanding SAP and how it relates to maintenance

TRAINING RESOURCES

- Maintenance and asset management certifications

STEVEN WALSH

SAP Master Data Specialist

EKATI DIAMOND MINE (Dominion Diamond Mines)

As Dominion Diamond's SAP master data specialist, Steven is part of the processing and asset optimization team for the Ekati mine. The team ensures that equipment at the mine operates as reliably as possible while considering costs and maximizing resources. The team works together to develop comprehensive maintenance plans to ensure their deliverables are met.

At the Ekati mine, everything from inventory and finance to human resources and maintenance is managed by the SAP software system, a powerful computerized management system.

Steven's first goal is making sure that SAP is loaded with accurate and up-to-date information from the departments at site. He also ensures the information is complete, because maintenance plans are only as good as the data they are built on.

Every day brings new challenges, and that is what Steven enjoys most about his job. "I find it satisfying to solve issues that arise over time and change the system as the company's requirements change. I also enjoy being a key player on the major projects team."

He believes that managing change is also the essence of life. "You have to adapt to the facts as they are presented to you. There is only one constant in life: that the sun will rise in the east and set in the west."
